AUBURN, ME 04210

JUNE 28, 2021
0800-1700
\$279
YORK POLICE DEPARTMENT
9 HANNAFORD DR.
YORK, ME

Cannabis is legal and more openly used around the nation: Can you detect and articulate its impairment? Today's forms (including edibles, flower and concentrates) have a much higher level of THC than the past. With more cannabis of a stronger variety available, officers greatly benefit from green lab training to help recognize its presence in motor vehicle operators.

Training Objectives include:

- In-depth discussion about Cannabis including its different forms, legal status and legislative history.
- A suggested and modified SFST Protocol for detecting cannabis impairment roadside as well as cannabis impaired driving investigation techniques.
 - Field Sobriety Techniques and exercises.
 - Behaviors of impairment by cannabis commonly observed.
 - Investigation and documentation suggestions for best practices
- Building a cannabis impaired driving court case.
- Chemical testing issues in impaired driving investigations
- Case Law updates
- Hands on Green Lab with Volunteers Cannabis Consumers
 - In compliance with state marijuana possession laws, we present a “green” lab designed for officers to practice impairment detection skills on volunteers dosed with known amounts cannabis. This includes flower, edibles, and concentrates. This will provide the attendees with a gauge of the reliability of their detection skills. The lab is run by civilian instructors.

Attendees are not exposed to marijuana (or any drug) during training.

**** This class is a controlled environment for officers to evaluate actual cannabis dosed impaired volunteers****
